Balancing Pool's Market Share Offer Control

CALGARY, ALBERTA, December 13, 2017

On December 8, 2017, the Balancing Pool assumed energy offer control for the Keephills generating units previously held by ENMAX. The Keephills generating units have a combined total capacity of 766 MW.

The addition of these generating units increases the Balancing Pool's total energy offer control to 4,643 MW or 29.2% pursuant to the Market Surveillance Administrator's 2017 Market Share Offer Control Report dated May 11, 2017.

The Balancing Pool's total energy offer control will continue to decrease over time as the Power Purchase Arrangements (PPAs) held by the Balancing Pool are terminated or expire. The Sundance A PPAs will expire on December 31, 2017 and the Balancing Pool has announced its decision to terminate the Sundance B and C PPAs on or before March 31, 2018. Following these events, the Balancing Pool's total energy offer control will decrease to 2,652 MW.
